Description

This course will provide practical training on the use of the *Clinical Descriptions and Diagnostic Requirements (CDDR)* with the focus on *ICD-11 Schizophrenia or other primary psychotic disorders*.

The ICD-11 has been approved by the World Health Assembly in 2019 and launched in 2022 and will become - following a transitional period - the new global standard for the reporting of health information.

The CDDR are the diagnostic manual for ICD-11 Mental, Behavioural or Neurodevelopmental Disorders designed for use by mental health professionals in clinical settings, produced by the WHO Department of Mental Health and Substance Use, launched March 8, 2024.

The course will be primarily offered towards psychiatrists in clinical practice. The main features of the new ICD-11 guidelines and changes from ICD-10 will be described by leading global experts who have been centrally involved in the development of the ICD-11. The course will emphasize active participation through application of the new guidelines to clinical vignettes based on real cases and discussion of differential diagnostic issues. The course will practically focus on the ICD-11 chapter of Schizophrenia or Other Primary Psychotic Disorders.

Methods and materials

Presentations, Case vignettes, References

Educational intentions

After the course the participants will be able to ...

... describe the major changes in the structure and content of diagnostic categories of ICD-11 mental disorders compared to ICD-10.

… be prepared to use the new classification for Psychotic Disorders in daily clinical practice.

… support the implementation of ICD-11 among psychiatric services and by members of national psychiatric associations.

Prerequisite knowledge

Participants should be familiar with psychiatric classification, preferentially ICD-10 or DSM-5. They should be either psychiatrists, including early career psychiatrists, or clinical psychologists with professional experience in mental healthcare settings.
